Joey (Yepeng) Zhu

me@yepengzhu.com Linkedin | GitHub | Portfolio | UK, London

Education

University of Nottingham **Nottingham, UK**

MSc in Advanced Computer Science (Merit Award) *Sep 2023 – Dec 2024*

Beijing Union University **Beijing, China**

Bachelor of Engineering in Software Engineering (Top 5%) *Sep 2019 – Jun 2023*

Work Experience

Spinnr Tech Ltd **London, UK**

Backend Engineer ***Jul 2025 – Present***

• Designed and implemented RESTful APIs for B2B integrations across multiple gaming providers, supporting high-volume transaction workflows with idempotency guarantees.

• Integrated Redis and PostgreSQL for reliable data handling and caching.

• Implemented structured logging to improve debugging efficiency and system observability.

• Built a Node.js-based mock platform to simulate external partner APIs, enabling faster integration testing and isolating issues between internal and third-party systems.

Everbridge, Inc **Beijing, China**

Software Development Engineer in Test ***Sep 2022 – Mar 2023***

• Automated 200+ test cases via Python/Selenium and executed 500+ manual tests per release, reducing testing time by 35% across 31 successful releases.

• Performed API testing using Postman and supported customer technical issues, diagnosing root causes and explaining solutions to non-technical users in English.

Project Experience

Joey OS: Serverless Web Desktop & Interactive Portfolio - *Next.js, AWS, Redis, WebSockets, LLM*

• Architected an OS-style SPA with Next.js/Tailwind and deployed an event-driven AWS backend (API Gateway, Python Lambda). Built a real-time monitoring system powered by DynamoDB and Redis.

• Built a low-latency real-time chat system integrating a web frontend with the Telegram API using WebSockets, achieving sub-second message delivery.

• Integrated an LLM-based assistant and secured APIs with IP-based rate limiting to prevent abuse and improve system reliability.

Visa Appointment Automation System - *Python, JavaScript, Telegram Bot* [Code]

• Built a multi-stage automation system integrating Telegram Bot API to send real-time notifications for monitoring and rescheduling visa appointments.

• Designed a browser-based (JavaScript/Tampermonkey) semi-automated solution to handle anti-bot constraints, avoiding detection and maintaining system reliability.

• Designed the system with modular stages (monitoring, booking, notification) to ensure scalability and adaptability.

• Delivered the MVP within 2 days, serving over 50 users and generating £2,000+ revenue within 2 weeks.

Skills

• **Programming Language:** Python, JavaScript, TypeScript, Go, Lua, C/C++, Java, HTML5, CSS

• **Frameworks:** React.js, Node.js, Express.js, Next.js, EJS, jQuery, Flask, Selenium, Bootstrap

• **Cloud & Tools:** Git, AWS (Lambda, API Gateway), WebSockets, Redis, Docker, Cursor, Kubernetes, CI/CD

• **Database:** PostgreSQL, MySQL, MongoDB, DynamoDB

Certification

• **AWS Certified Solutions Architect – Associate** **Certificate:** [Link]
